

## **GLOSSARY**

### **Divaricating**

Branches are wide angled and intertangled.

### **Genus / genera**

A rank in the biological classification of organisms. It falls between the family and species. Take Manuka as an example: Myrtaceae is the family, *Leptospermum* is the genus and *scoparium* is the species. Plant names are typically shown as genus and species, thus Manuka is called *Leptospermum scoparium*.

### **Petiole**

The stalk connecting a leaf to the plant stem.

### **Stipules**

Secondary leaf growth around the petiole.
